GEL CARD INCUBATOR

The UPLAB gel card incubator is specially designed to provide the necessary incubation process for the blood grouping method with gel cards. This device is ideal for the controlled incubation of gel cards and increases the accuracy of results.

The UPLAB gel card incubator is an easy-to-use and low-energy consumption device. Additionally, its compact design does not take up much space in your laboratory. Our product is manufactured in compliance with quality and safety standards.

Incubator Features:

- 2 Independent Chambers, Each Containing 12 Slots
- Automatic Slot Temperature Control
- Temperature Control Range: RT+5°C - 40°C
- Timing Control: 1-99 min
- Temperature Homogeneity: $\pm 0.5^{\circ}\text{C}$
- Temperature Accuracy: $\pm 1^{\circ}\text{C}$
- Electrostatic Powder Coated Steel
- Device Dimensions: 250x330x130 mm
- Device Weight: 6.5 kg
- Power Input: 220-110 V AC 50/60 Hz
